

Single Point Failure

Leadon Root-Bridge

Low Bridge ID

BID = Priority + MAC

Priority = value

Default priority = 32768

All the ports in root bridge is selected as designated port

Designated port = forwarding port = open port

Now we want to find open port in non root bridge

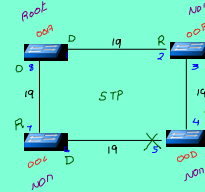

open port = root port

Conditions

Lowest path cost

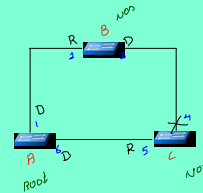

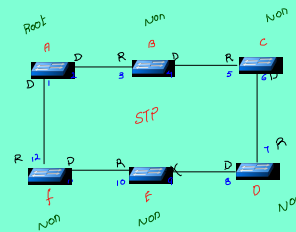

Lowest rec BID

Lowest port id

R → D

Segment
Low BID = Design
High BID = Alternative

STP

Spanning tree protocol

It is a protocol is use to avoid Layer 2 loop
by using some block port
